

"GET BUSY!" IS MR. FINNEY'S TEXT

(Continued from Page Two.)

Barre M. Ling opened by remarking that it remained for a Moses to lead the Israelites to the Promised Land, and it remained for Yavapai county to be discovered in its true light by Mr. Finney. In looking over the faces seated at the tables he realized that the day of the Hassayamper is past, and he was constrained to admit that the greatest obstacle to the development of the country was the Hassayamper, and that included the business men who ought to be present on this occasion. "If we remember the words 'Get busy,' we have solved the problem of the advancement of our interests," said the speaker. "We don't appreciate the things we have. The suggestions of Mr. Finney are absolutely of no value if we allow them to fall on barren soil." He then explained the purposes and advantages of the newly-organized stock exchange, and believed that it would assist materially in the development of the county. He concluded by endorsing the remarks of Mr. Finney concerning the banks, and expressed the opinion that money is too high and too hard to get.

Mr. McCarty, ex-controller of St. Paul, who arrived from the east last evening, was introduced. He was deeply impressed with the personnel of the club, and pleased with his reception. After recounting what the Commercial club of his city had accomplished, he recommended that committees should be appointed on streets, taxation, the public good, and that they should meet weekly.

Hon. Fred Wright, ex-mayor of St. Paul, was the next speaker, and he heartily endorsed the sentiments that he had heard expressed.

R. N. Fredericks, in his remarks, pleasantly took exceptions to the reflections on the bankers, and said he did not think anyone had experienced difficulty in securing money if he gave such security as was demanded of a custodian of the public funds. Referring to the future work of the club, he stated that General Baldwin, who recently visited here, would recommend that the old regimental building, known as Gen. Crook's headquarters at Whipple, should be preserved. The club, said the speaker, should take hold of this matter, adopt resolutions, and forward them to General Ainsworth, the military secretary.

John M. Ross, chairman of the entertainment committee, was the concluding speaker. He thought that the banquet should not terminate without accomplishing something, and he therefore moved that a committee of five be appointed to put in motion the machinery by which the suggestion of Mr. Finney and that of Mr. Fredericks might be carried out, a plan for the same to be submitted at the next dinner of the club. The motion was unanimously adopted, and the chair named Mr. Ross, R. N. Fredericks, M. B. Hazeltine, C. E. Finney and Leroy Anderson as the committee.

The company then arose, and all took the opportunity of cordially greeting the visitors from St. Paul. Many members lingered until a late hour and discussed the able paper of the evening, the unanimous opinion being that it was not only a masterly address but was a document that should be read by every citizen in the county.

Get SCOTT'S Emulsion

When you go to a drug store and ask for Scott's Emulsion you know what you want; the man knows you ought to have it. Don't be surprised, though, if you are offered something else. Wines, cordials, extracts, etc., of cod liver oil are plentiful but don't imagine you are getting cod liver oil when you take them. Every year for thirty years we've been increasing the sales of Scott's Emulsion. Why? Because it has always been better than any substitute for it.

BANK ROLL GONE AFTER A MIX-UP.

(From Wednesday's Daily.)
Closely following upon the bold and successful hold up of John Foley's saloon at Ash Fork on the morning of the 21st at 1:10 o'clock, this famous business place and resort was again touched on Monday evening at 10:30 o'clock to the tune of a little over 200 in coin of the realm.

From reliable information received here yesterday it appears that a little before the hour named, while the house was crowded, a quarrel arose between some of the parties in the place, which threatened to resolve itself into a free for all fight, but for the timely interference of Deputy sheriff John Foley and the dealer of the roulette game.

During the absence of the dealers from the table the lady musician of the place, by request, took charge of the bank roll and placed it in a sack, fearing that a rough house might follow, and the money be appropriated during the melee. After peace was restored, she stepped away from the table, leaving the sack of coin, which later could not be found, and the whereabouts of which has not up to the present time been solved.

The mysterious disappearance of this sack of coin, coupled with the recent daring and scientific hold up, has aroused the residents of Ash Fork to the fact that the lawless element are getting a foothold there, and a sharp lookout is being kept for all suspicious characters who are seen loitering around the town or the several resorts of the place.

PLEASED WITH THE GOLD LODE PROPERTY.

(From Wednesday's Daily.)
C. N. Smith of Milwaukee, Wis., a director of the Arizona Gold Lode Mines company, and Charles H. Smith, a state senator from Markeson, Wis., who have been here for the past week, on a visit of inspection of the company's properties in the Cherry creek district, will leave for their eastern homes today.

Charles H. Smith, when seen last evening by a Journal-Miner representative, said "My visit to Cherry creek was in the interest of a number of prospective investors in the Arizona Gold Lode company, and I am pleased to state, that after a thorough investigation of the properties, that my report will be a favorable one. I found everything there even better than represented, and there is no doubt in my mind but that the property is one of great value. There are immense bodies of ore in sight, which I find to be of a very good grade, and with the capacity of the present mill increased and other improvements which have been decided upon completed, there is no question in my mind but that it will turn out to be a proposition of great business merit."

As a sequel to the visit of these investors here, it was learned from a reliable source that arrangements had already been perfected for the immediate installation of an additional 20 stamps to the mill now on the ground at the company's camp, as well as a large cyanide plant, the stamp mill to be later increased to fifty stamps as soon as a narrow gauge track 2½ miles in length now under construction connecting all the mines with the mill was completed.

A four wheel drive motor truck, recently ordered by the company for the hauling of the sulphide ores of the Leghorn mine to the Humboldt smelter is expected to be delivered here within ninety days, the machine to be used for hauling oil for fuel and other camp supplies from Dewey station on return trips. This machine, which is a late invention, has drivers connected with each of the four wheels, is run by a gasoline motor, and has a speed of eight miles an hour over ordinary country roads. In line with these new improvements the force of miners on the different mines will be increased from time to time, operations at the present time being principally confined to the Leghorn, Gold Lode, Red-cloud, and Washburn claims.

The shaft on the Leghorn is now down to a depth of 240 feet, showing increased values in the ores. The pay streak is four feet wide in the bottom, one foot of which is a heavy sulphide ore which it is proposed to ship to the Humboldt smelter, while the other three feet, carrying values principally in gold, is reduced by the milling and concentrating process.

A drift is being run on the Gold Lode vein, which exposes a body of free milling ore of an average width of three feet of a very good grade, while the 500 foot tunnel on the Bugler vein shows a continuous vein of free milling gold ore that will plate better than \$10 to the ton. Besides the claims mentioned others of the group have excellent showings in shafts

ranging in depth from 30 to 100 feet. The holdings of the Arizona Gold Lode Mines company, consisting of 17 full claims and a millsite, are situated about 16 miles east of Dewey station on the Bradshaw mountain railroad. The results obtained from the operation of the ten stamp mill, which has been in operation on ore from the mines since the early part of February, have been so satisfactory that the company has decided on the many improvements stated above.

The survey of the proposed Humboldt and Verde valley railroad crosses the ground, and it is thought that the line will be constructed this coming year.

NEW MACHINERY FOR LAWRENCE GROUP.

(From Wednesday's Daily.)
Stukey Brothers have just shipped a carload of machinery to Hillside station, to be installed on the Lawrence group of mines, in the Eureka district, where all arrangements are now completed for the sinking of a shaft to a depth of 500 feet and the development of the property by a series of laterals from the shaft in a minerlike and scientific way.

The Lawrence group, which was purchased about eight years ago, is situated about one mile east of Mountain Springs, three miles south of the Hillside mine, and about 26 miles northwest of Hillside station on the S. F. P. and P. railroad, with which it is connected by a good mountain wagon road.

The group consists of twelve claims, 8 of which are located on the same vein, which shows up strong and continuous on the surface in some places over 12 feet wide, for a distance of over two miles, along a granite and porphyry contact.

A tunnel 150 feet in length and six shafts ranging in depth from 30 to 70 feet, constitutes the development on the ground, which shows a good vein of ore, carrying fair values in gold.

The district has long borne a reputation for rich and extensive mineral deposits, among which may be mentioned the famous Hillside property which has produced an enormous amount of very valuable silver ore. The Lawrence copper properties, in which large deposits of copper ore are developed, are situated but a short distance from the camp, as well as a number of other mines and prospects deserving of favorable mention.

SAYS SMELTER IS A POEM OF MECHANISM.

(From Wednesday's Daily.)
Written for the Journal-Miner
By Kean St. Charles,
Editor Kingman Mineral Wealth.

The plant of the Arizona Smelting company at Humboldt is a poem of mechanism.

They have taken advantage of all the up-to-date improvements in smelting and concentration. Only one furnace of the two copper stacks is now turning out blister copper. The other one will soon be in commission. Ore is piled in every available place around the plant, even thrown on the ground. When the other furnace gets to smelting, this will be changed. Ore is what they want, but it came in greater quantities than was expected.

No coke is used anywhere about the plant. Oil is the fuel, and electricity the power. It is a model plant.

A 400 ton concentrator is being erected in connection with the smelter. Its principal departure from the ordinary concentrator is the addition of two Hancock jigs. This style of jig is used only at Morenci and Clifton in Arizona. Their capacity is large, one jig at Morenci doing the work of 50 Frue vanners, 700 tons daily being put through the one machine.

What strikes the visitor most at the smelter is the absence of coke for fuel. Not a pound of coke is used. Oil is the fuel, and electricity the power.

The first carload of blister copper shipped last week to the refineries was valued at \$60,000.

A contract has been let for a lead furnace with a capacity of 400 tons daily. When this plant gets to work, all kinds of ore will be treated.

Many of the men in charge of the different departments are skilled operatives from Butte and Anaconda, Montana.

No doubt Yavapai has a great prosperity builder in the new smelter at Humboldt.

Devil's Island Torture.

is no worse than the terrible case of Piles that afflicted me 10 years. Then I was advised to apply Bucklen's Arnica Salve and less than a box permanently cured me, writes L. S. Napier, of Rugles, Ky. Heals all wounds, Burns and Sores like magic. 25c at all druggists.

MOUNTAINS OF IRON AND COPPER ORE.

(From Wednesday's Daily.)
"There is no question in my mind but what the Hill Williams mountains will lead all the other districts in this territory in copper production in the course of a few years," said George Wood last evening to a Journal-Miner man after returning from a visit to that section.

"I have seen all the big copper camps," he said, "and as a copper country I believe that there is no better than the range which traverses the country from House's Wells to the Signal mine."

Speaking of the different camps visited, he said, "At the Osborne camp about eight miles north from the wells, there are miles of veins with heavy iron cappings showing copper values which are in places developed to some depth, showing large bodies of sulphides of very good grade. The owners of the property are now preparing to make a test shipment to the Humboldt smelter and are pushing work on the different claims. There are enormous bodies of ore to be seen in the workings, and there is no longer any doubt but that the camp will be one of the great copper producers as soon as a plant is installed and put in operation there."

"Eight miles north of the Osborne camp lies Mineral Hill, which is a veritable mountain of iron and copper ore and a self fluxing proposition, there being deposits of lime in unlimited quantities on the ground within easy reach."

Mineral Hill is within one mile from Bill Williams river, which has an ample and never failing supply of water sufficient to supply any demands that may be made on it for any sized reduction plant.

"Two miles east of Mineral Hill is the Planet mine, a property considered by mining men to be worth more than \$1,000,000. A large number of miners are at work there developing the immense bodies of iron and copper ore which are in sight."

"Fifteen miles to the southeast of the Planet camp the Signal mine, one of the remarkably rich ones of that country, is reached. Six months ago this property sold for \$24,000, and three months later after a few hundred feet of work was done there it found new owners who paid \$500,000 for it. Since then a crosscut has been run across the vein, which shows 45 feet of sulphide ore in place, carrying values of from 20 to 50 per cent in copper. Arrangements are being made to prosecute the development on a much larger scale than ever, the new owners, realizing the extent and great possibilities of their holdings, turning a deaf ear to all advances for its purchase."

"I also visited the properties of the Liberty Gold Copper company, which are owned by Prescott people, and think well of them. There is certainly a very fine showing there which improves with every foot of work done. The surface indications are equally as good here as in any of the other camps mentioned."

"All over the range, wherever any veins have been opened to any extent, large iron cappings are found similar in all respects to the Mineral Hill, Osborne, Planet, and Signal deposits."

"The nearest railroad station to all of these camps is House's wells, which the Arizona and California railroad will reach in a very short time. Good wagon roads lead from the place, and water can be secured here in unlimited quantity at a depth of about twenty feet."

KINNEY GROUP DEVELOPS SOME EXCELLENT ORE.

(From Wednesday's Daily.)
John Kinney, who is developing the Kinney group of mines in the Big Bug district, arrived in the city Monday evening with samples from an important strike recently made in his property. The discovery was made by a few days ago, and the work of opening it up has not as yet progressed far enough to get a fair idea of its extent or richness.

In the tunnel being run about 650 feet from the face, where a raise is being driven for air, a two foot vein of ore was uncovered, which samples well in gold, silver, and copper. The ledge is a large one, and the new find was made between where the regular ore body is found and the footwall.

Work is being rushed on the tunnel ahead, and Mr. Kinney is negotiating for the purchase of a hoist to install at a shaft which it is proposed to commence sinking on the vein in the near future.

The claims are situated in the immediate vicinity of Eugene siding on the Poland branch of the Bradshaw Mountain railroad, which solves the transportation problem, and the section is a well watered one.

Journal-Miner for high-class job work

BEEMER WINS.

(From Wednesday's Daily.)
Attorneys E. S. Clark and R. E. Morrison are home from Yuma after representing H. J. Beemer in his famous suit against Pease in the term of the district court held there recently. The suit was brought to rescind a \$2,500,000 contract, and another suit was instituted by Pease for the recovery of the same amount said to be due him on the contract. By stipulation both suits were consolidated and tried as one before a jury, which returned a verdict for Beemer, awarding him \$1 damages, when all he prayed for in his cause of action was the annulment of the contract.

Attorneys Clark and Morrison were opposed by a brilliant array of counsel, including some of the brightest legal minds in southern part of the territory. The Pease side of the case was represented by A. C. Baker, Christy & Lewis and Street & Alexander, prominent Phoenix counsellors, aided by Henry A. Wupperman and Timmons & Baxter of Yuma.

The suit was over the purchase of a mining property in the Quartzite district of Yuma county, and was one of the most sensational civil suits tried in southern Arizona for a number of years.

OBITUARY NOTICE.

Death of the Brother of Philip Hoover, of this City.

The following obituary of Samuel Hoover, brother of our esteemed fellow citizen, Philip Hoover, member of the firm of Stephens & Hoover of this city, appeared in the Bellefonte (Pa.) Democrat of April 7:

Saturday evening, April 7, died at his home at Hannah station, from a complication of diseases, aged 68 years, 1 month and 17 days. He was the son of the late Philip Hoover, was born in Stonevalley, and moved with his parents at the age of 12 years, to Tyrone, since which time his life has been spent in the upper end of Bald Eagle valley. When the call for troops was issued in 1861 he was one of the first men to respond, enlisted for one year. Since the war he has been engaged in farming. He leaves to mourn a widow, and the following children: William, of Port Matilda; Allen, of Mt. Pleasant; Annie, wife of Harry Chaney of Port Matilda; Linnie, wife of Odelbert Downing, of Vail; and Miss Sallie at home. Three brothers also survived: Philip, of Arizona; John, of Bellwood; and Alex. H., of Fillmore. He was a man of whom it can be truly said his good deeds will live after him, and especially in his church. Politically he was a Democrat, and also interested himself in the affairs of the twp., usually filling positions of trust. He was buried from his late home on Tuesday afternoon, in the Tyrone cemetery. He was a member of the Port Matilda lodge of Odd Fellows, which order had charge of the funeral.

SMALL BARN BURNS ON THE FAGERBERG PROPERTY.

(From Friday's Daily)
About 4 o'clock yesterday afternoon a small barn on the rear end of the lot occupied by a house on Virginia street, belonging to Dixon Fagerberg, near the Otis addition, in some unaccountable way caught on fire, and despite the fact that the entire volunteer fire department of the city responded promptly to the siren call of the fire whistle, the structure burned to the ground.

The blaze was, however, confined to the building where it started, thereby saving the destruction of many handsome residences facing Mount Vernon street, in the immediate vicinity. The loss, it is said, will not exceed \$100. A small quantity of dynamite and black powder stored in the upper portion near the roof luckily burned without exploding. Dude hose company No. 2 was awarded the record for first water.

Cough Remedy
The Children's Favorite
Coughs, Colds, Croup and Whooping Cough.
This remedy is famous for its cures over a large part of the civilized world. It can always be depended upon. It contains no opium or other harmful drug and may be given as confidently to a baby as to an adult.
Price 25 cts; Large Size, 50 cts.

LABOR TROUBLES PARTLY CLOSE DOWN PLANT.

A few days ago the men working at the Detroit Copper Mining company's concentrator signed a petition requesting the granting of an eight-hour day. The company offered the men their choice of continuing on a twelve hour basis, as they have been in the past, with the same rate, or reducing the day to eight hours with a cut of 50 cents per day in wages.

The men refused, says the Morenci Leader, to accept either of these propositions, and sent word to the superintendent that they would stay at the present scale until May 1. In consequence, on Monday morning the concentrator foreman received word to shut down, and the men received their pay, many leaving the camp within the few days that followed. A large proportion of the men have been in the employ of the company for a number of years, and most of these were reluctant to leave, but, unable to arrive at a settlement satisfactory to both parties there was nothing further to be done.

The repair gang continued working on various parts of the plant, and yesterday sufficient men were found to enable them to run the east side of the mill, the crusher and sampling plants, during one shift, and in all probability before many days the mill will be running full force once more.

From now on the concentrator will be run exclusively on an eight-hour basis, with the reduction of 50 cents a day in the wage scale.

Here from Mayer.
Gus Moo, the Mayer stockman and miner, came in last evening on a short business visit.

Here from Middleton.
Lionel Kendrick of Middleton is in the city on a business visit.
Crown King Visitor.
